Omar Badr

Austin, TX | (424) 413-3839 | badromar396@gmail.com | LinkedIn

Experience

Software Engineer | Ruby on Rails, React, TypeScript, GraphQL — Sep 2025 – Present
PayPal · Braintree Enterprise Onboarding — *Austin, TX*

- Shipped the first self-service path for Braintree's 35K U.S. merchants to open additional accounts, cutting median application time from 45 to 15 minutes to get merchants onboarded and transacting sooner
- Owned most of the frontend end to end, building the resumable React and TypeScript onboarding application form and the status page that shows the live underwriting state and required merchant actions
- Extended the Rails provisioning service to merge and encrypt PII (SSNs, bank account numbers) carried over from a merchant's existing application
- Pre-filled business data from existing merchant records to auto-fill 20 of 30 application fields, reusing param-building logic from the legacy Ruby on Rails onboarding form
- Built the Java GraphQL mutation with multipart support for Venmo logo uploads and integrated it end-to-end on the frontend

Software Engineer Intern | Ruby on Rails — May 2025 – Aug 2025
PayPal · Braintree Enterprise Onboarding — *Austin, TX*

- Built a Rails integration between Braintree's merchant onboarding service and PayPal's ServiceNow API, cutting ticket creation time 90% for 30+ engineers
- Designed idempotent state machine logic syncing provisioning workflows with ServiceNow, making ticket transitions safe to retry and replacing manual status tracking

Backend Software Engineer Intern | Node.js, Express, PostgreSQL, GCP — Nov 2024 – Feb 2025
BreatheIT Solutions — *Remote*

- Built the MVC backend for a health and wellness platform, shipping 28 REST endpoints across freemium and enterprise tiers
- Deployed on Google Cloud Platform, configuring NGINX for load balancing and PM2 for process management
- Implemented OAuth 2.0 against the Google API with encrypted token storage and automatic refresh

Projects

piclr (Link) | Swift, SwiftUI, Supabase, PostgreSQL, WidgetKit

- Built a social iOS app for pickleball players covering friend graphs, game organization, and tournament hosting
- Implemented subscription billing and entitlement management via RevenueCat, with Supabase backing auth, relational data, and real-time updates across users

Education

San Diego State University | B.S. Computer Science — *May 2025*

Skills

Languages: Ruby, TypeScript, JavaScript, Python, Swift, SQL
Backend: Ruby on Rails, GraphQL, Node.js, Express, PostgreSQL, REST, OAuth 2.0
Frontend: React, TypeScript, Remix, SwiftUI, HTML/CSS
Infrastructure & Testing: Google Cloud Platform, Docker, NGINX, PM2, Supabase, RSpec, Cypress
