Experience

Appzeto - IT Services and Solutions **June 2026 - Oct 2026**
Full Stack developer

- **Configured and implemented** end-to-end features for a Quick Commerce platform (MERN stack) based on client requirements, following SDLC practices across requirement analysis, development and deployment — covering UI, backend APIs, and database layers for real-time order tracking, cart management, and payment workflows.
- **Analyzed, tested, and resolved** production issues in REST APIs and JWT-based authentication within an Agile development environment, incorporating feedback and delivering reliable fixes for live order and payment workflows.
- **Diagnosed and reconfigured** a broken Billing Software system from the ground up — corrected core calculation logic across 4 business modules (purchase, sales, mill, job workflows) per functional requirements, added Jest-based testing to validate fixes, and documented the changes to turn a non-functional product into a stable, deployable one.

Technical Skills

Languages: JavaScript, C++.
Web Technologies: React.js, Node.js, Express.js, RESTful API design.
Database :MySQL , MongoDB .
Tools: Visual Studio Code, Postman, GitHub.

Projects

MoodRx | *Mental Health Analysis*

- **Translated a real-world healthcare problem** (lack of accessible mental health tracking) into a scalable technical solution serving personalized insights to users.
- **Architected Python-driven AI pipelines for real-time emotion analysis**, leveraging Sentiment Analysis, OpenAI Whisper for voice transcription, and Librosa for audio feature extraction (pitch, tone, tempo) to detect emotional states beyond just text.
- **Built backend services using Node.js and Express.js**, integrating AI/ML services to process voice and text input, enabling real-time delivery of personalized mental health insights to users within seconds.
- **Designed and implemented RESTful APIs for 3 core modules** — community chat, mood tracking, and wellness report generation — enabling structured data collection and continuous user monitoring over time.

Find Your Track

- **Architected a dual-portal Himalayan trek marketplace** (React, Redux Toolkit) connecting hikers directly with verified trekking agencies, eliminating middleman fees through a zero-commission booking model with live role-switching between traveller, organizer, and admin views.
- **Built an AI-driven trek recommendation engine** that matches hikers to expeditions based on profile data (fitness level, hiking experience, emergency contacts), alongside a multi-filter catalog (trekking, camping, adventure tours) with difficulty, duration, and group-size metadata.
- **Developed a verified partner onboarding system** for trekking agencies with automated format validation for government IDs (Aadhaar, PAN, GSTIN, passport, travel licence) and an admin-approval workflow, plus organizer tools for batch scheduling, Leaflet-based map pinning, and gallery management.
- **Designed an admin control panel** with hiker/organizer management, revenue analytics with CSV export, featured trek curation, and system-wide broadcast messaging, supporting the platform end-to-end with full dark mode implementation.

Education

Indore Institute of Science and Technology **Oct 2022 - Jun 2026**
Bachelor of Technology CGPA 7.53 *Indore,India*

Higher Secondary Education **Jun 2021 – Mar 2022**
Children's Care H.S School 83% *Pithampur,India*
